

Wireless in Nuclear at Exelon

Bill Ansley
Digital Plant Innovation

Exelon Generation®

Exelon Overview

Exelon Generation

Power Generation

- Largest merchant fleet in the nation ~33 GW of capacity, with unparalleled upside
- One of the largest and best managed nuclear fleets in the world (~19 GW)
- Significant gas generation capacity (~10 GW)
- Renewable portfolio (~1 GW), mostly contracted

Constellation

- Leading competitive energy provider in the U.S.
- Customer-facing business, with ~2.5 M customers and large wholesale business
- Top-notch portfolio and risk management capabilities
- Extensive suite of products including Load Response, RECs Distributed Solar

Exelon Utilities

BGE, ComEd, PECO, & PEPCO

- Largest electric and gas distribution company in the nation with ~10 M customers
- Diversified across multiple jurisdictions - Illinois, Maryland, Pennsylvania, Delaware, New Jersey, Wash DC
- Significant investments in Smart Grid technologies
- Transmission infrastructure improvement at utilities

Competitive Business

Regulated Business

Exelon is the largest competitive integrated energy company in the U.S.

What are the Possibilities?

Advanced computer applications

- Implementation of pattern recognition software and physics/operating experience based “Analytics” to provide advance warning subtle but real failure modes
- “Analytics” identify the type of failure and recommend outages including work order generation, parts and scheduling of the asset outage
- “Analytics” monitor key performance indicators (cost, inventory, maintenance strategy, etc) to identify potential vulnerabilities as well as savings opportunities

Organizational Performance

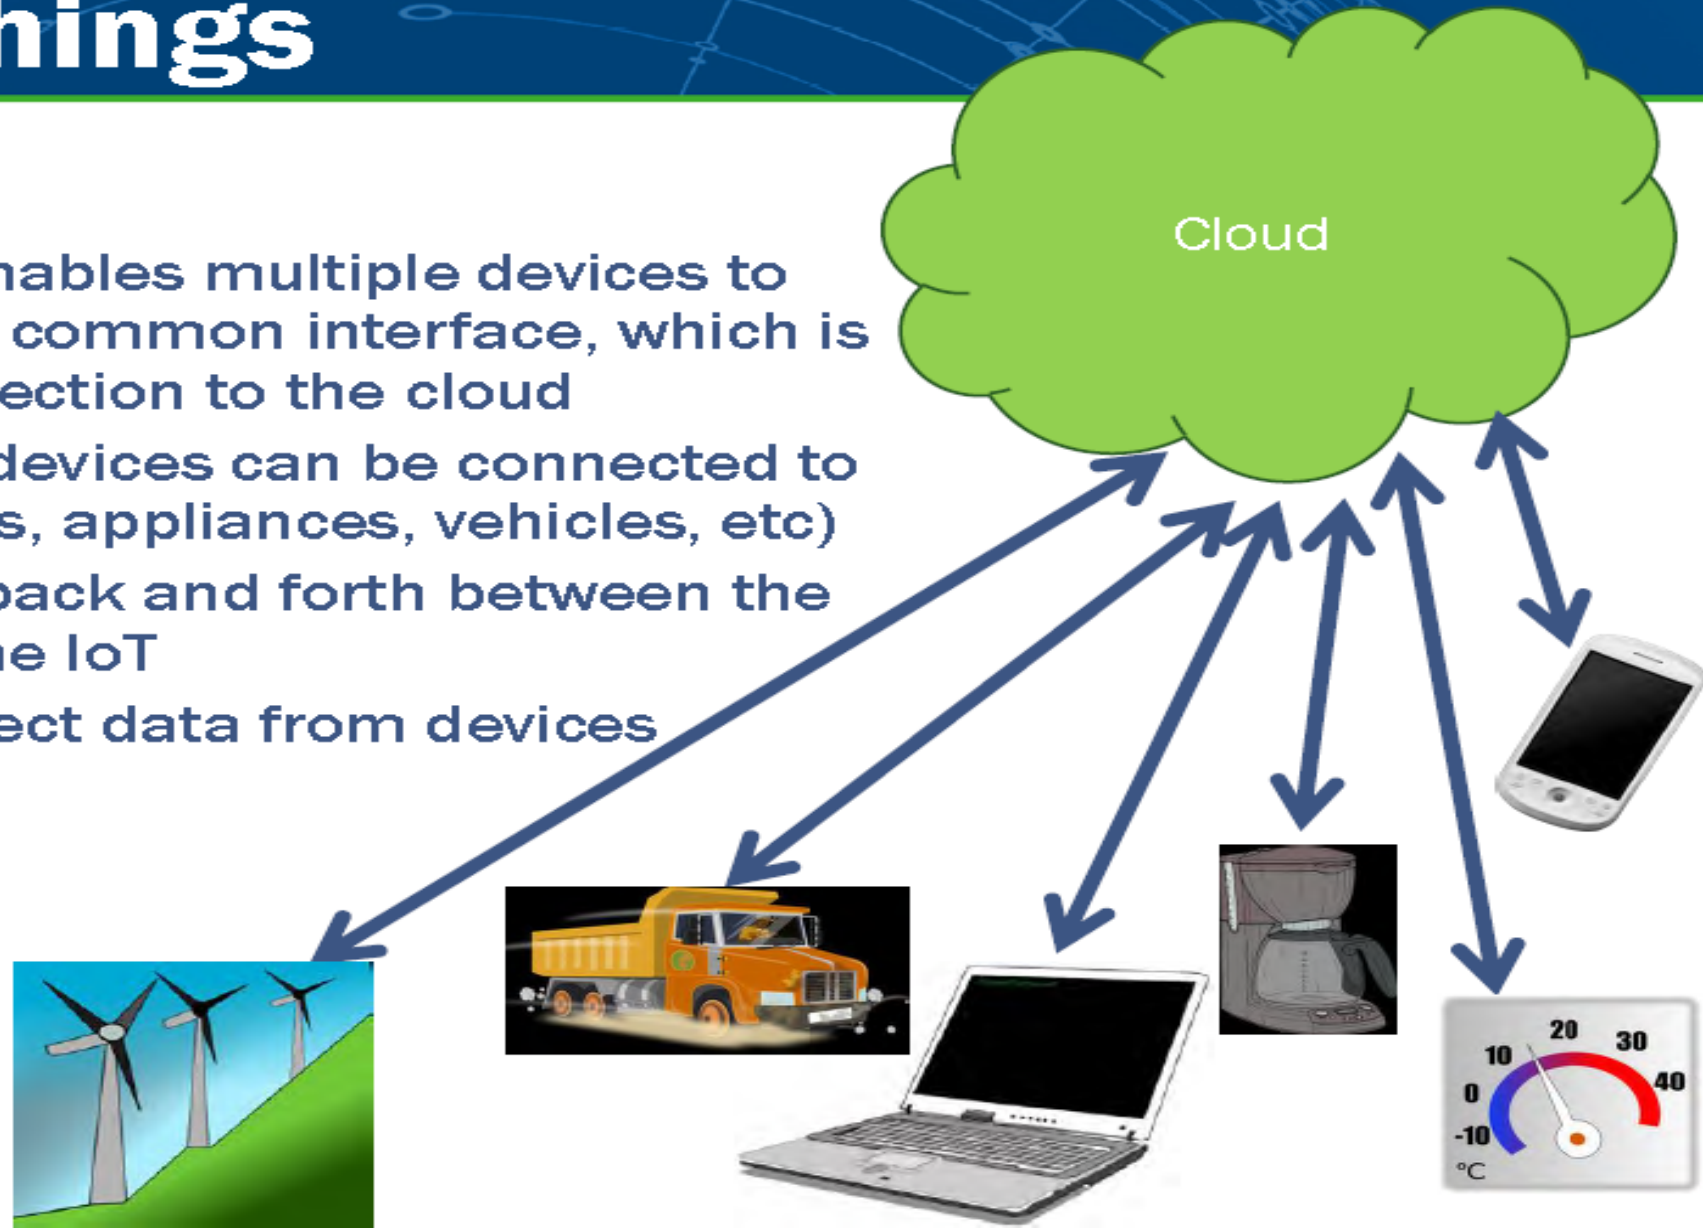

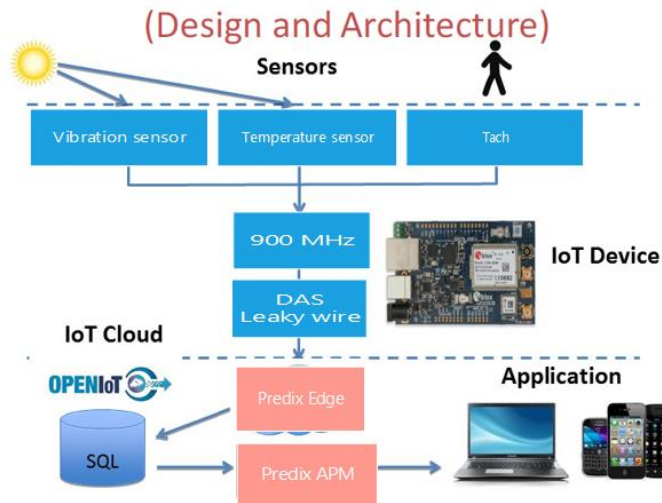

- Technology allows for the centralization of data and more effective monitoring
- Improved computer applications/interfaces allow for improved productivity and performance of plant staff

State of art communications infrastructure

- Wireless infrastructure that provides cost effective method to utilize wireless sensors and innovative monitoring/predictive technologies
- Low cost wireless sensors (design once-install many) installed to improve predictive technology and facilitate elimination of high cost time based maintenance

Internet of Things

- The Internet of Things enables multiple devices to communicate through a common interface, which is typically a wireless connection to the cloud
- Many different types of devices can be connected to IoT (Phones, thermostats, appliances, vehicles, etc)
- Ultimately, data is sent back and forth between the devices that comprise the IoT
- Sensors are used to collect data from devices

Predix Asset Performance Management (APM)

- Transform PRiSM APR models to Predix APM
- Co-developing advanced analytics models including
 - Fault diagnostic
 - Thermal Performance
 - Load following
 - Startup & shutdown monitoring
- Form Building software for data collection (PI Process, user created apps, etc.)
- Direct Web Hosted Applications for Desktop, and mobile applications
- Meridium APM – Maintenance Optimization

Unified Platform across all of Ex Gen

Core Products & Platform

Core Products

- Presently Available

- Under Development

Asset Performance

RELIABILITY

Increase availability and longer asset life

Operational Optimization

RISK MITIGATION

Lower operations and financial risk

COST REDUCTION

Lower operating costs with great efficiencies

Business Optimization

PROFITABLE GROWTH

Increase production for market advancement

Cyber Security

SECURE PLATFORM

Monitoring of connected industrial equipment

Advanced Controls

AUTOMATED SYSTEMS

Control System will be automated based on Analytics

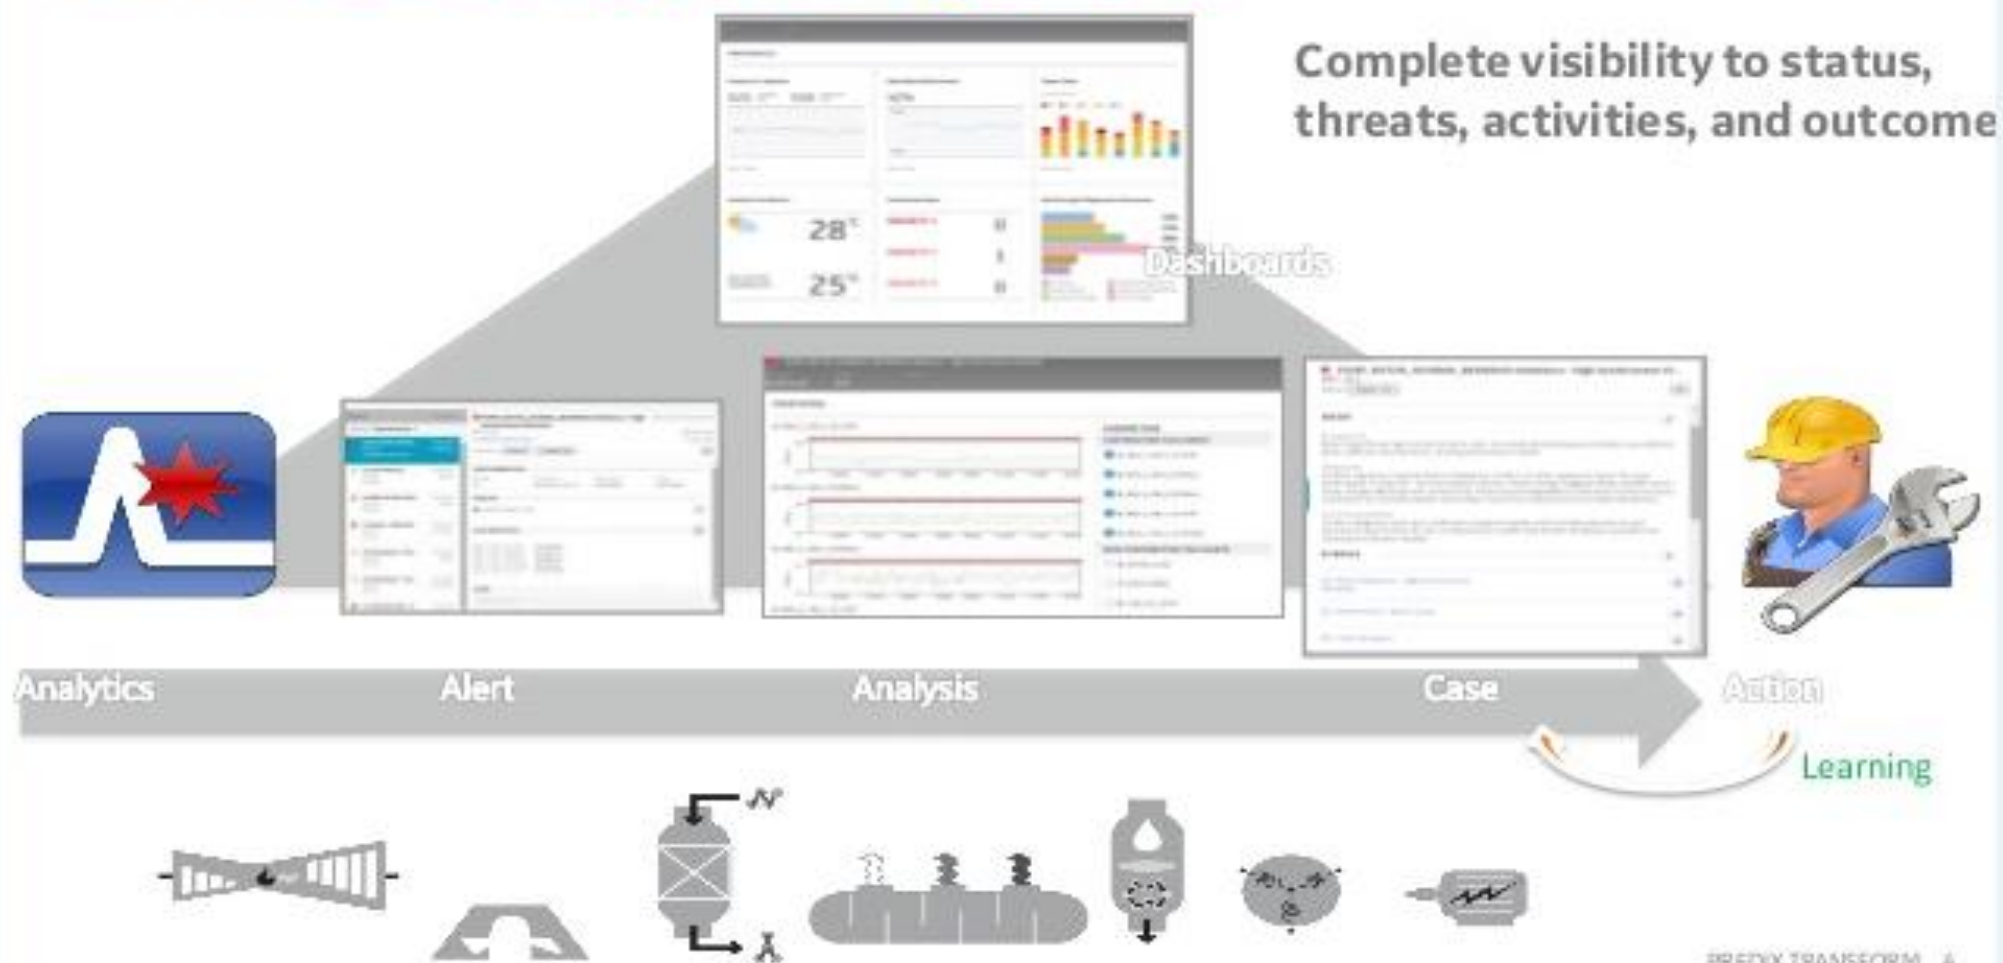

Custom Solution Platform

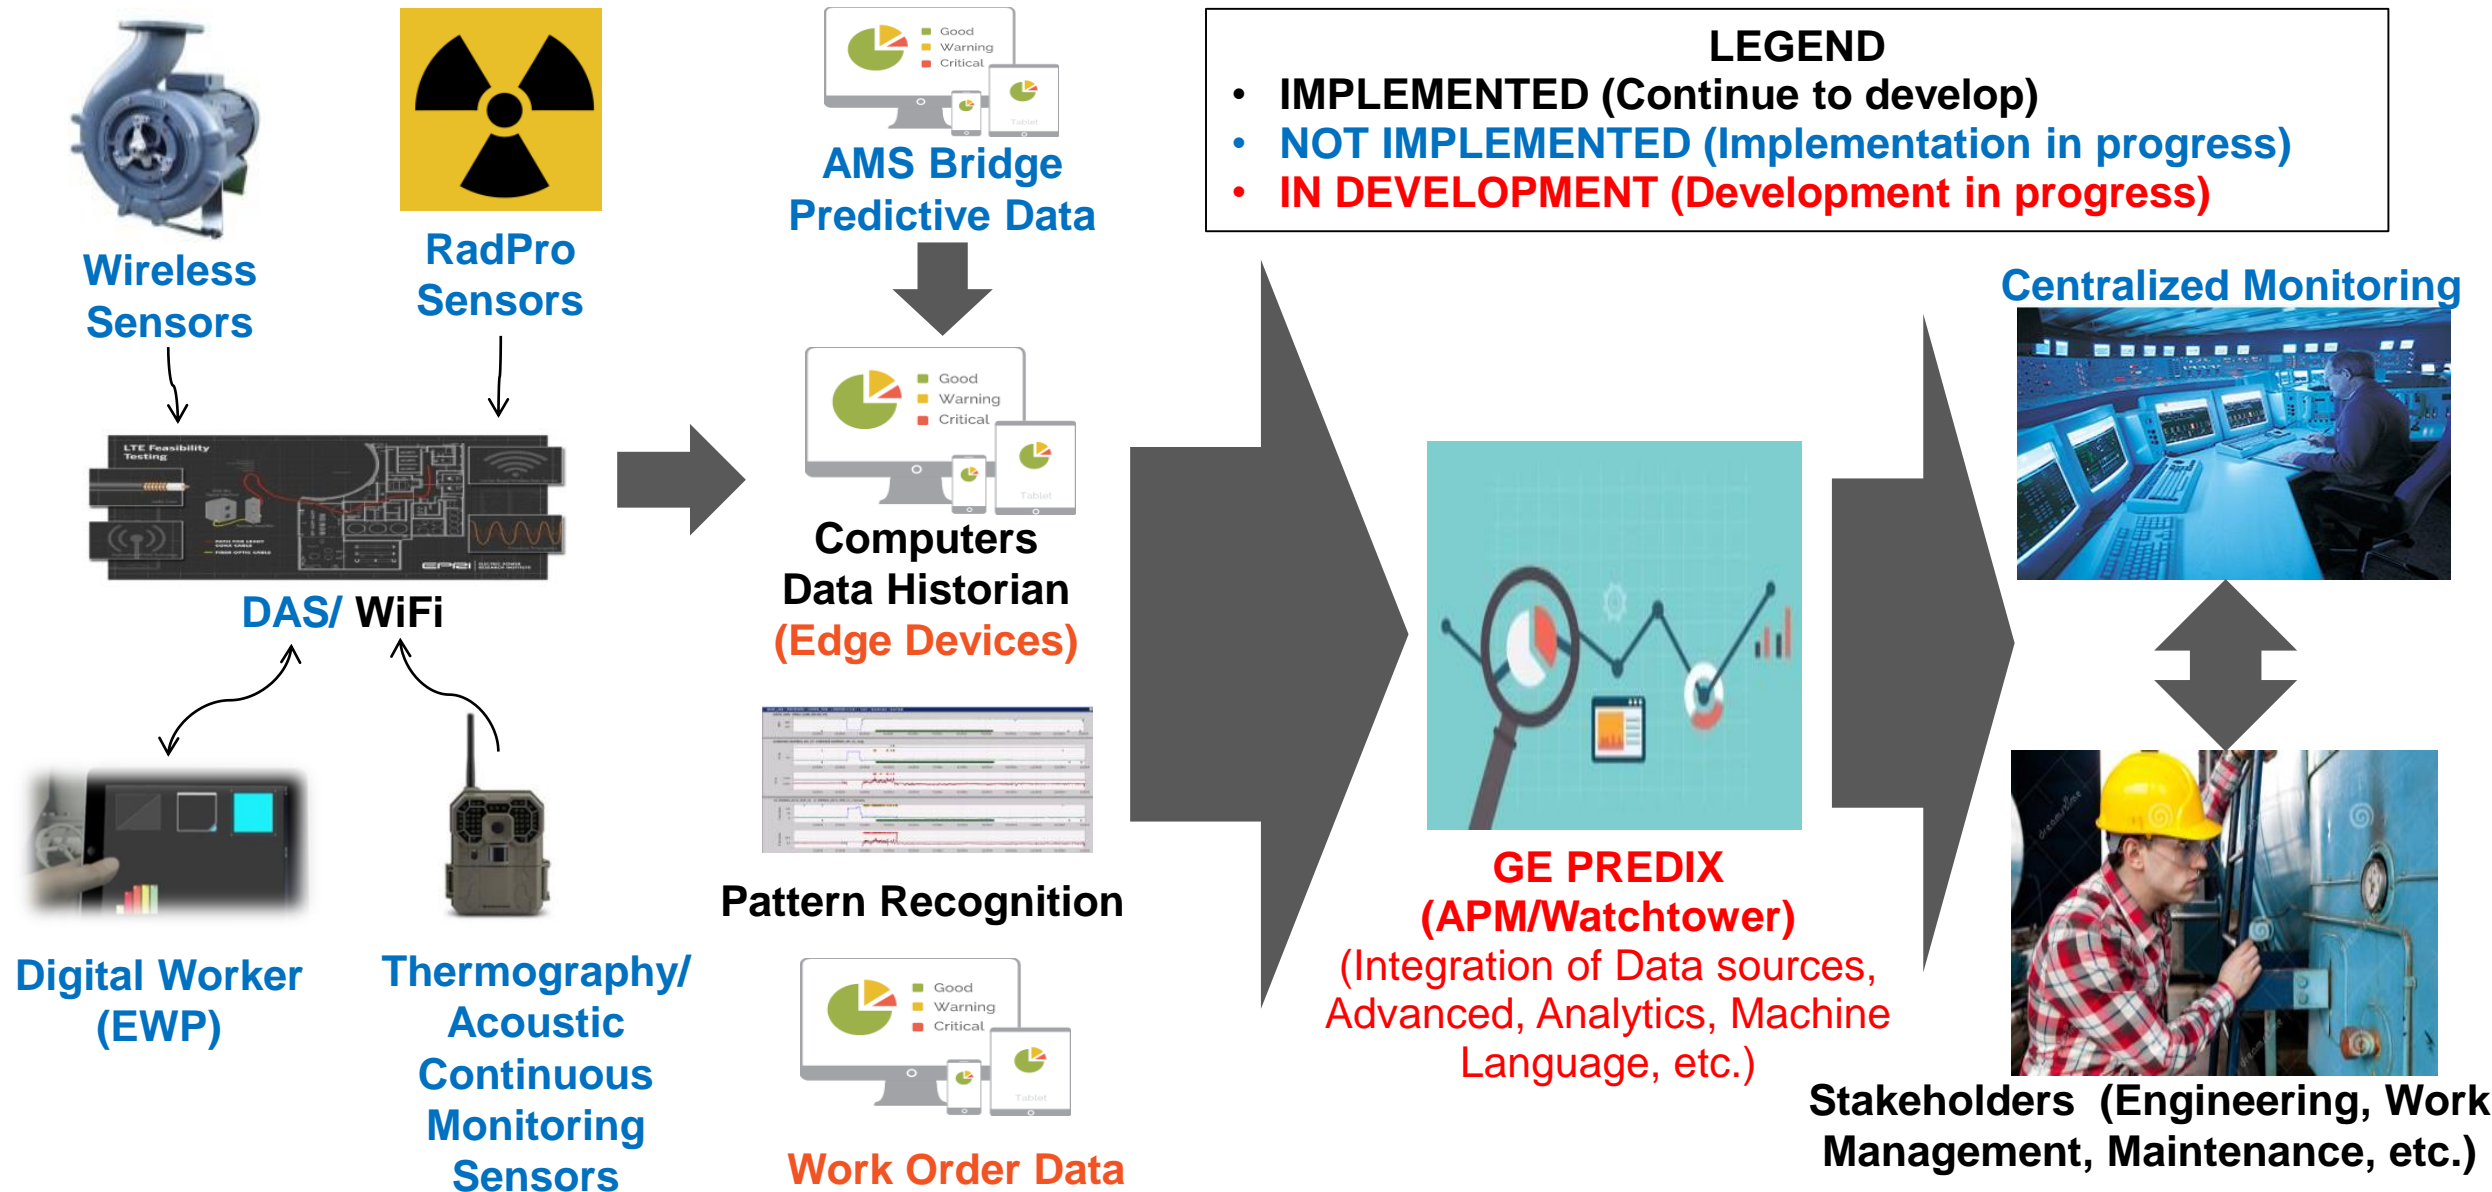

OPEN DEVELOPMENT

APM Reliability Management

Centralized Performance Monitoring

Value of Additional Sensors – Condensate Booster Pump Example

What we have in M&D APR Model Today:

- Pump Status – turn model on/off
- Thrust Bearing Temperature
- Stator Temperature
- Motor Lo Sleeve Bearing Temperature

What we don't have:

- Individual Pump Suction Pressure (Local Gauge Instrument)
- Individual Pump Discharge Pressure (Local Gauge Instrument)
- Suction Flow (Not available – HDR FLOW ONLY)
- Discharge Flow (Not available –HDR FLOW ONLY)
- Header Discharge Pressure (in PI – cannot be correlated at the component level)
- Header Flow (in PI - cannot be correlated at the component level)
- No motor current or voltage
- No vibration data (taken monthly manually)
- No oil information in PI

Motor/Pump Failure Modes

Limited Focus Today

No Sensor Coverage

- High Bearing Temperature
- High Motor Winding Temp
- Worn Thrust Bearing
- Motor Bearing Lubrication
- Worn Motor ODE Bearing
- Worn Pump DE Bearing
- Worn Pump Internals
- Shaft Misalignment
- Shaft Imbalance
- Power Supply Harmonics
- Power Cable Damage
- Rotor Bars Broken
- Stator Winding Fault
- Rotor Eccentricity
- Loose Foundation
- Pump Cavitation
- Supply Line Power Problem

Motor/Pump Failure Modes

- High Bearing Temperature
- High Motor Winding Temp
- Worn Thrust Bearing
- Motor Bearing Lubrication
- Worn Motor ODE Bearing
- Worn Pump DE Bearing
- Worn Pump Internals
- Shaft Misalignment
- Shaft Imbalance
- Power Supply Harmonics
- Power Cable Damage
- Rotor Bars Broken
- Stator Winding Fault
- Rotor Eccentricity
- Loose Foundation
- Pump Cavitation
- Supply Line Power Problem

Truth in Numbers – Think Applications

Current State

Wireless radios

Mobile Workers (electronic work packages)

Temperature sensors

Vibration sensors (limited)

Future State

Current State plus:

More vibration sensors

Dosimetry

Gauge readers

Valve position sensors

RFID tags

Structural Health Monitoring

We could add over 1,000 sensors per unit

Why the Focus on Wireless?

An Attractive Alternative

Distributed Antenna Systems (DAS)

Control network volume and performance

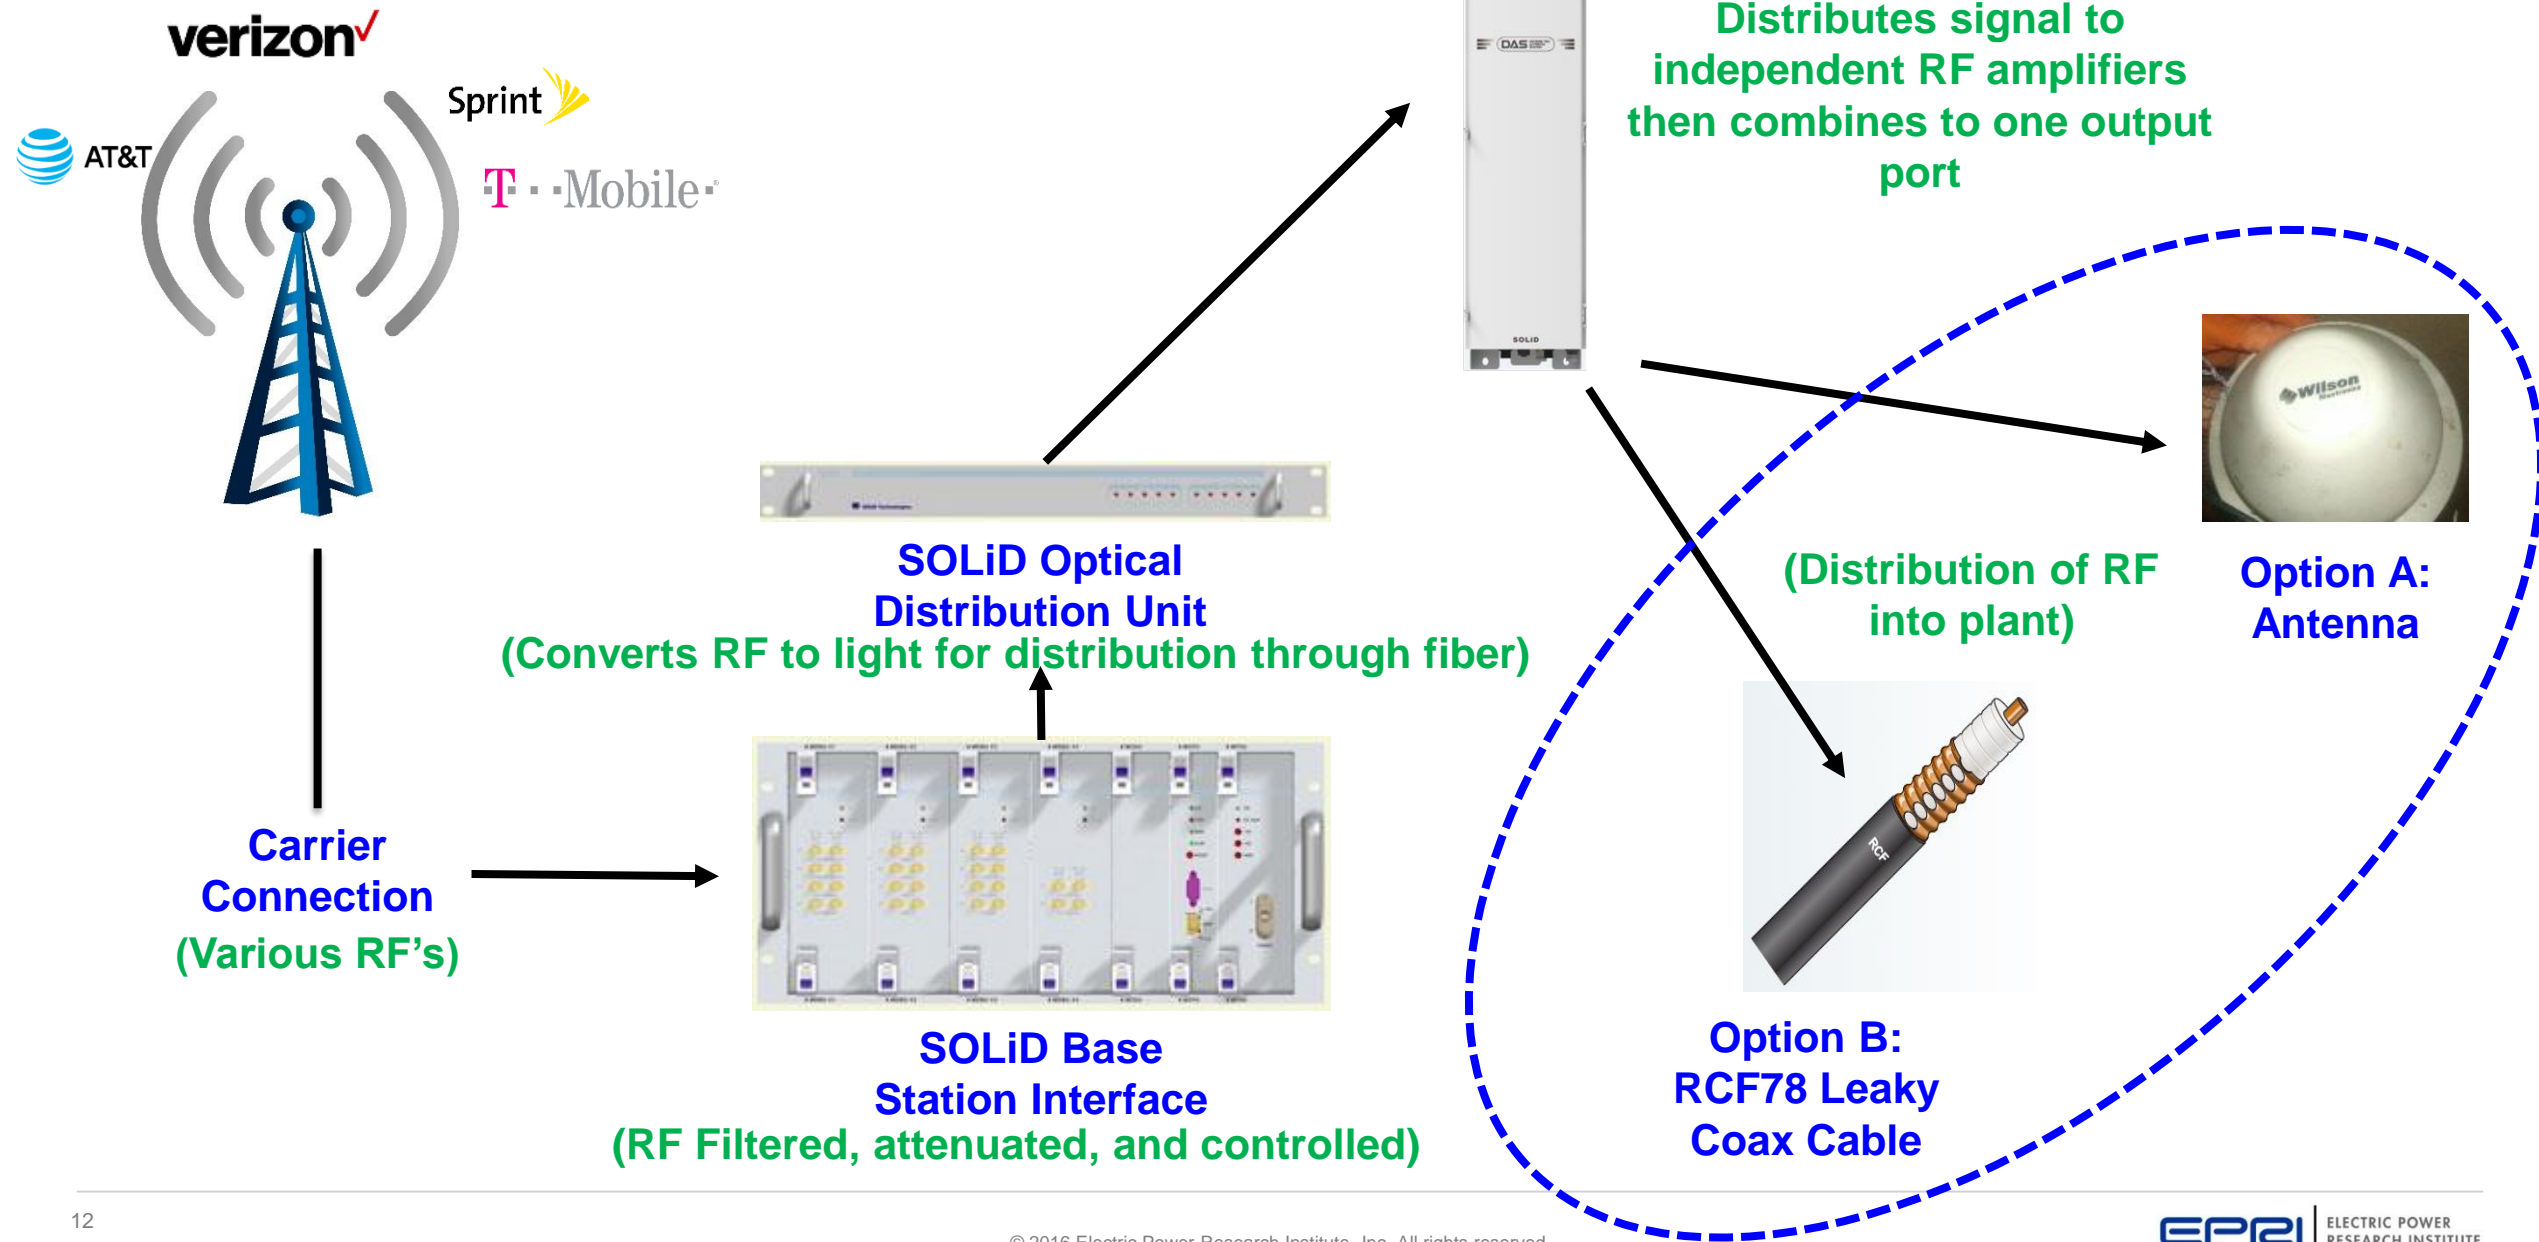

**Verizon
AT&T
Spring
T-Mobile**

Bring signal into areas that have poor coverage.

How it Works

Ideal Configuration for Power Plants (example)

433mHz – Sensors and
radio communications

700 LTE – tablets/cellular
devices for mWM

450mHz – radio communications

900mHz – Sensors

Open

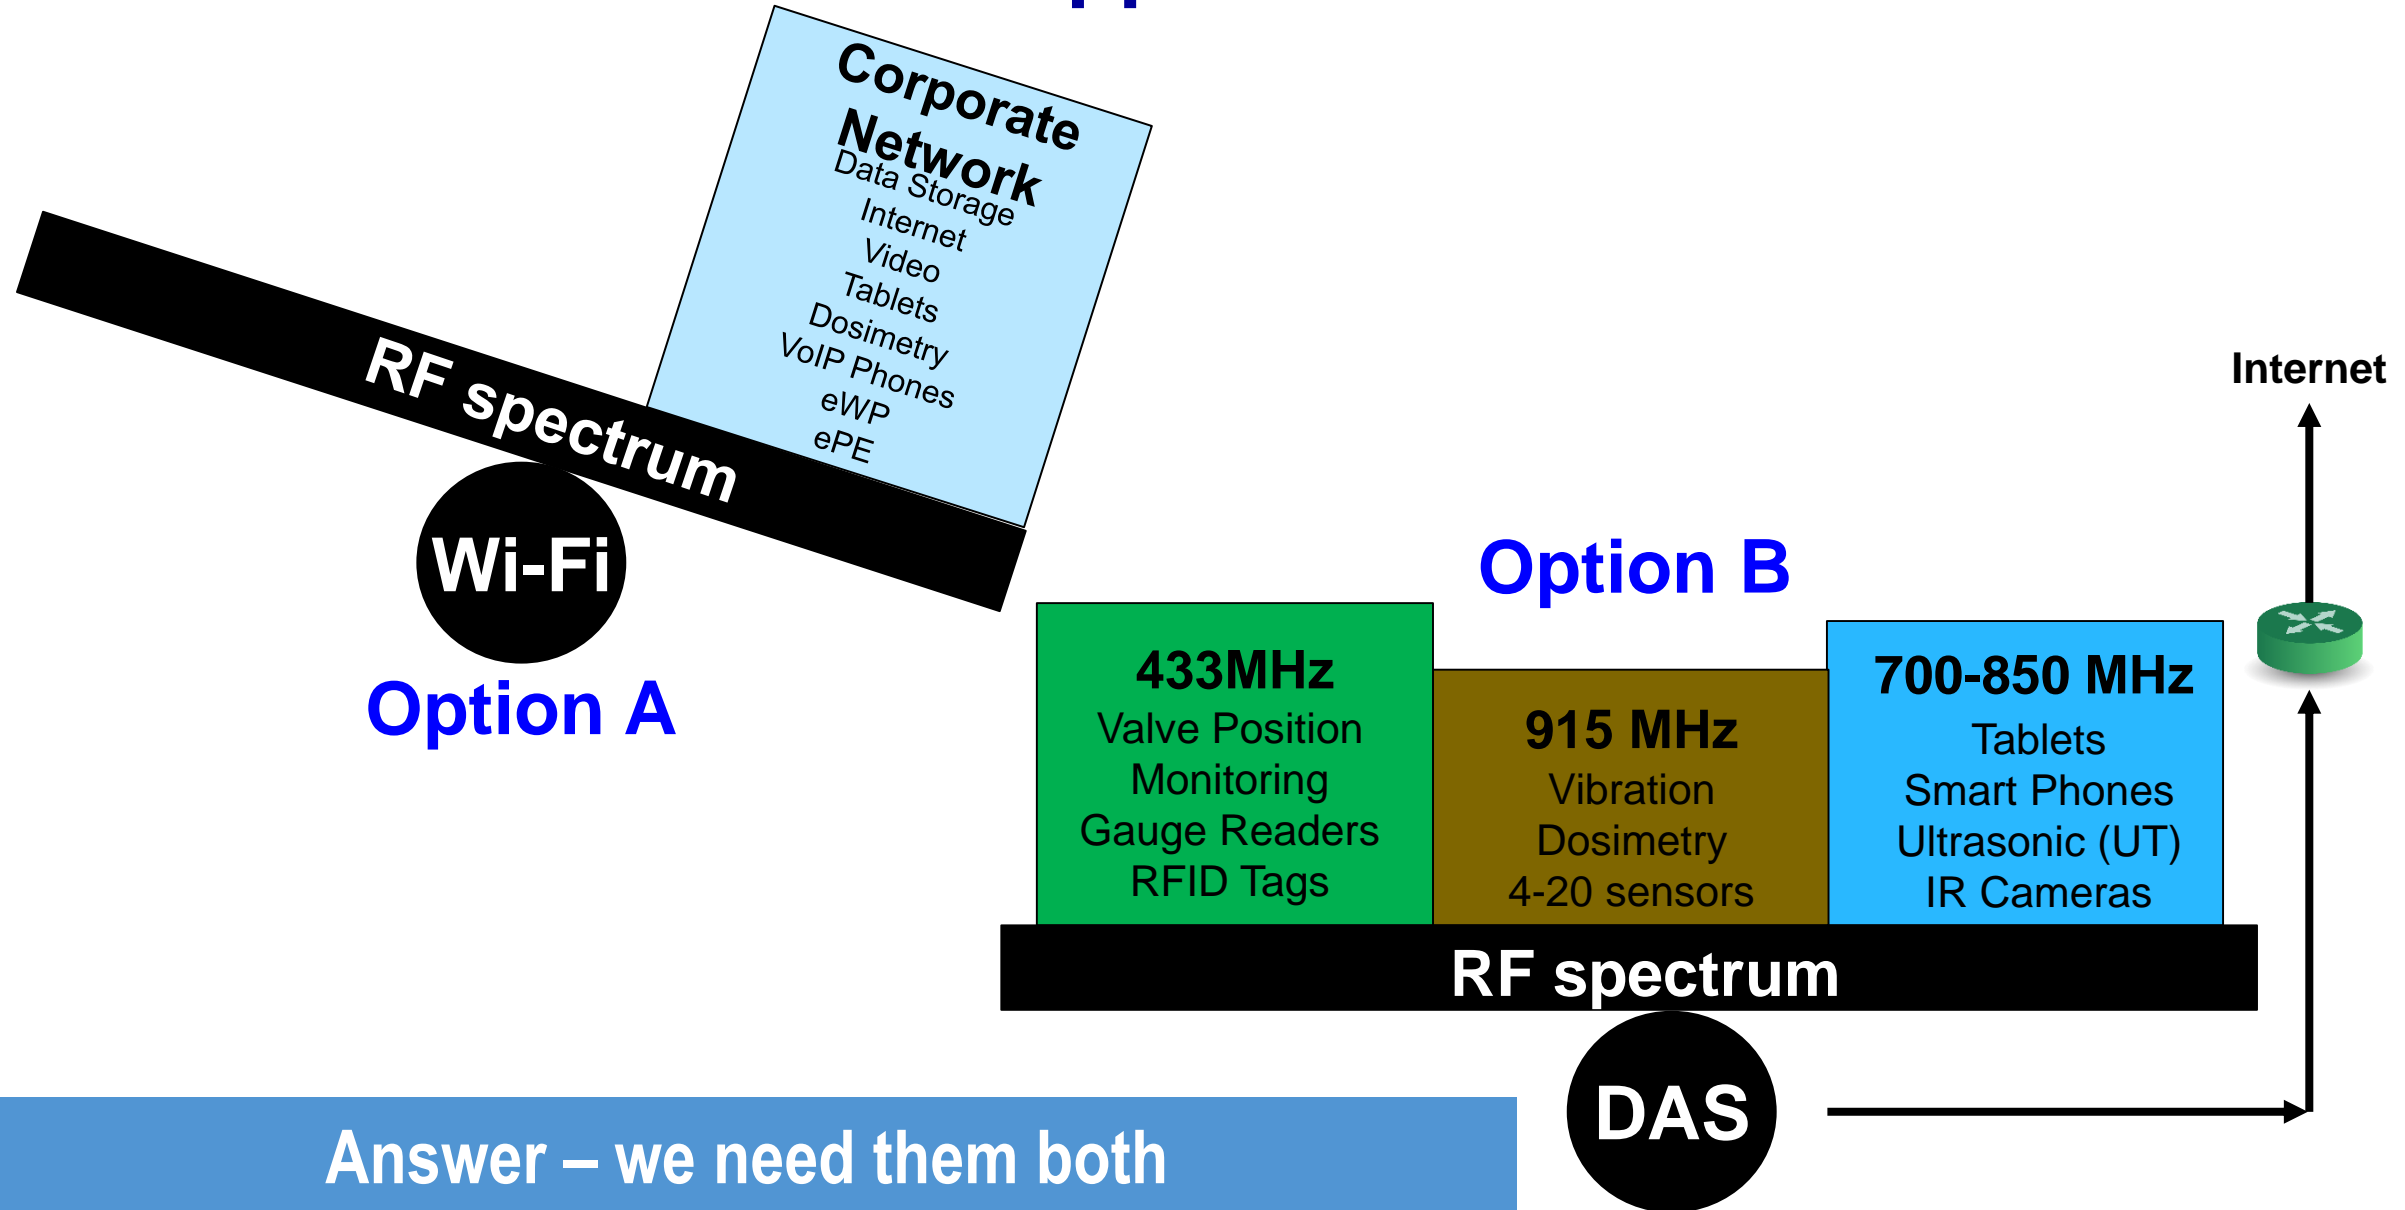

Open

DAS Wireless Sensor Network Setup – Typical

Wi-Fi verse DAS – Which Approach is Better?

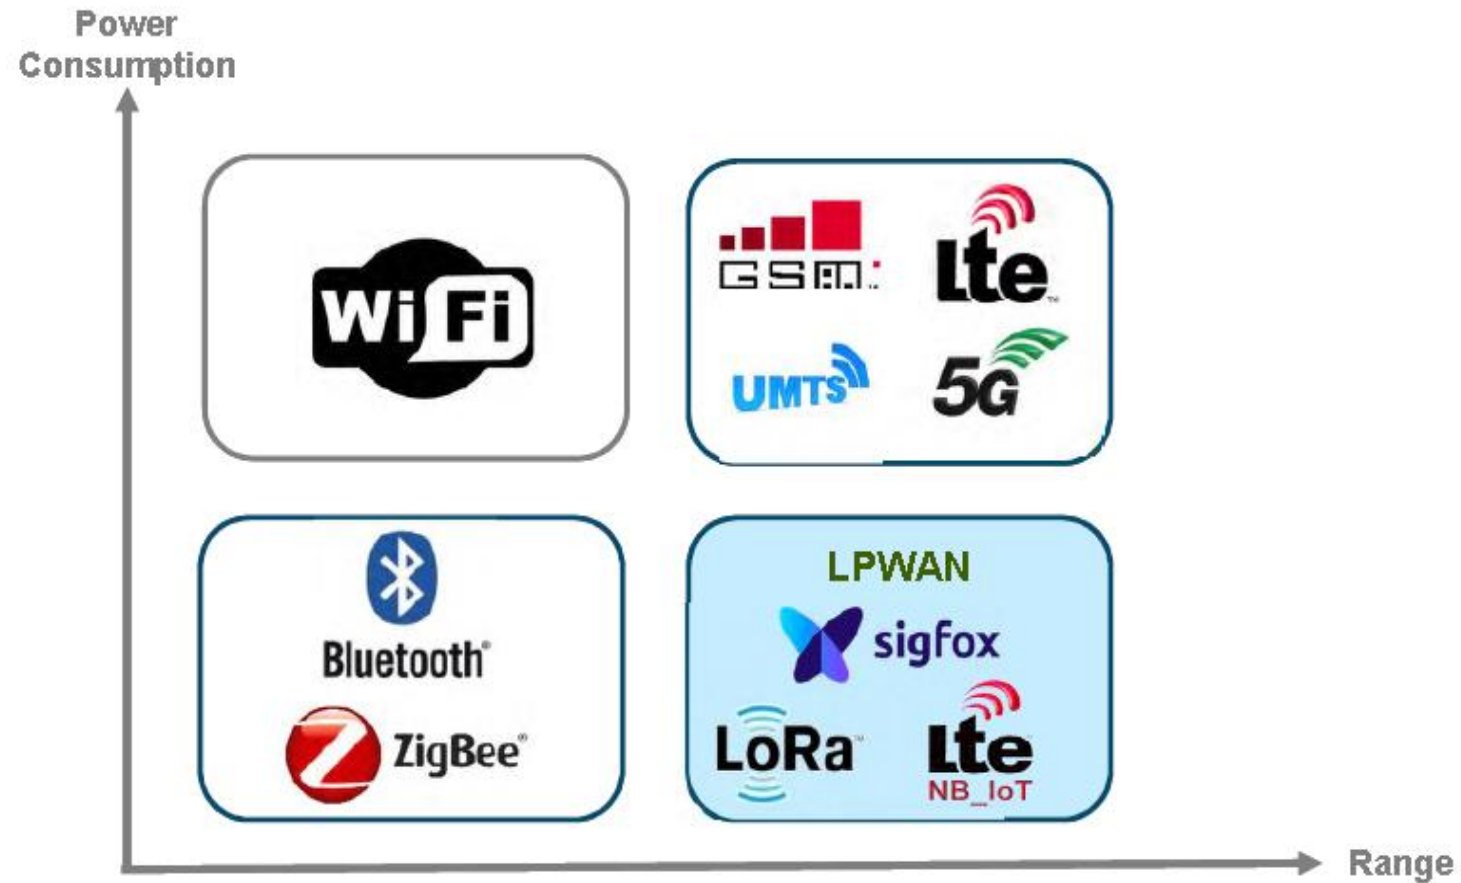

IIoT Requirements...Voice, Video, Data and Sensor (VVDS)

Why many different wireless technologies?

- Solution → Filling up the Technology gap

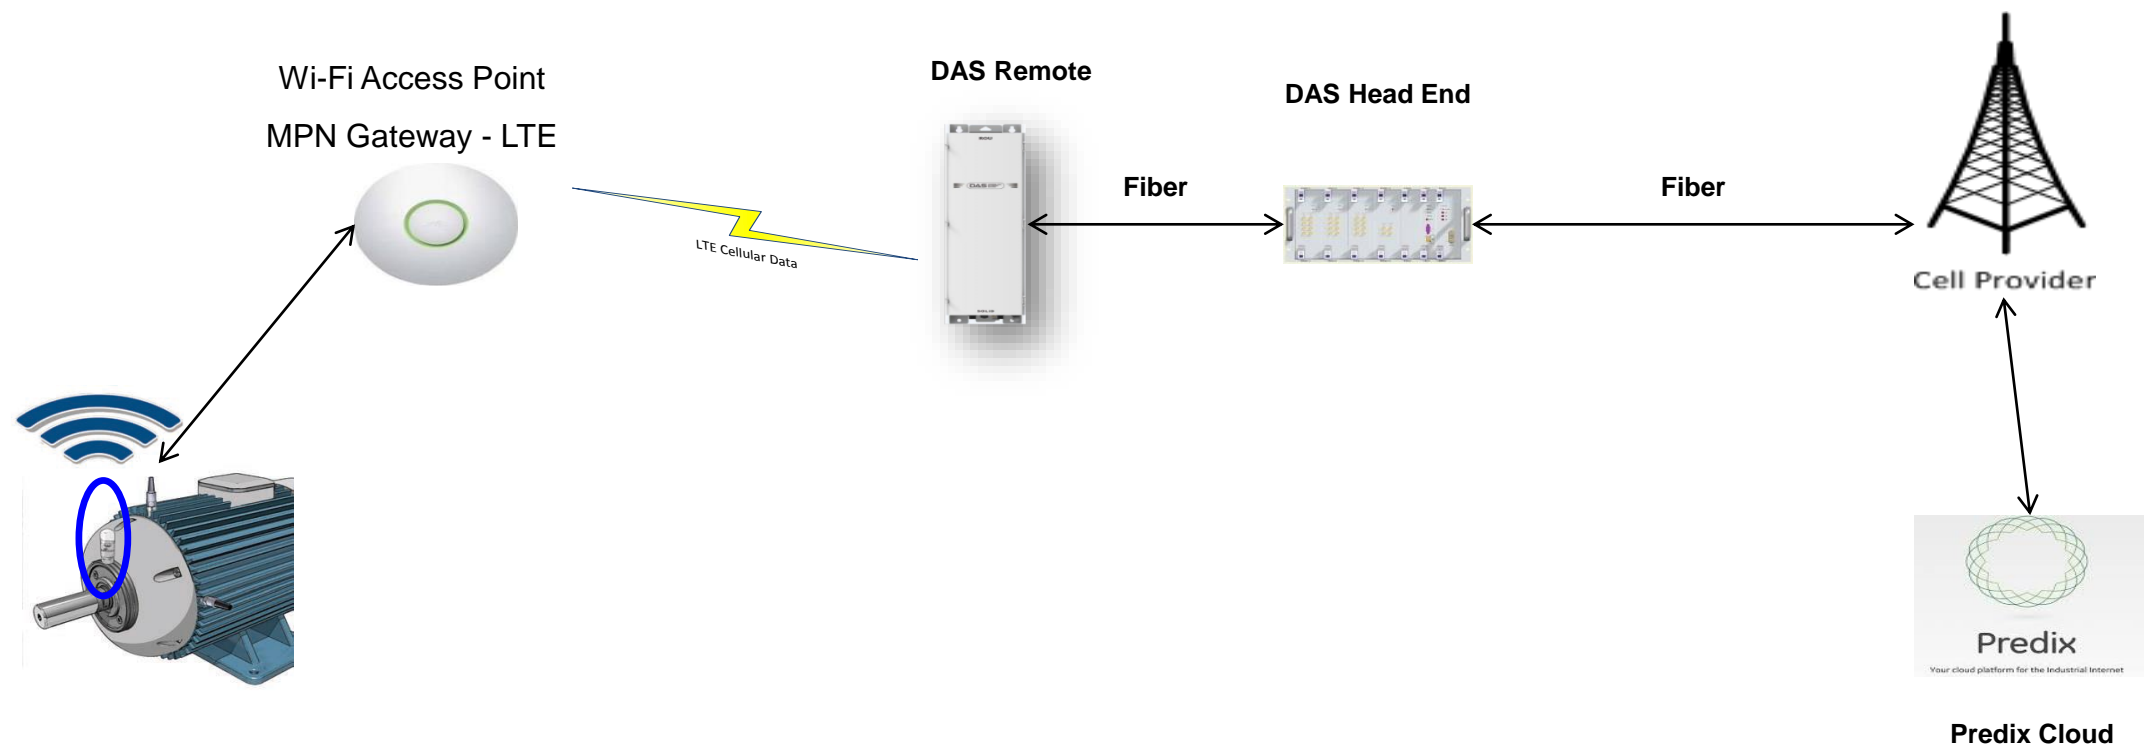

5

Frequency-hopping spread spectrum (FHSS)

Available Frequencies

DAS – LTE on MPN

Wireless Sensors – Petasense

- Petasense, Inc. manufactures and sells self-contained battery powered wireless devices to monitor rotational machinery.
- Using various on-board sensors, the devices collect raw data, process, and feed it to cloud services for examination.
- The processed data is then examined with machine learning for patterns and anomalies to help determine future failures and equipment wear and tear.

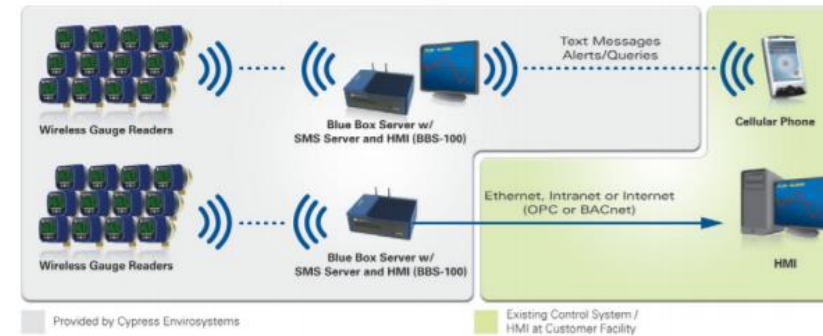

Cypress Gauge readers (900 MHz) project

- Leaky Wire/Distributed Antenna System (DAS) 900 MHz Network
- Wireless Gauge, Pressure & Temperatures Sensors and other innovative monitoring technologies – good for one way communication
- Site & Centralized monitoring
 - GE Predix Dashboard
 - GE Predix – APM/Analytics Implementation (2017 to 2018)

Two Possible Wireless Gauge Reader Configurations

Innovative Technologies

Non-Contact Vibration (IRIS M)

- Measurement taken without contact (Video camera)
- Displacement and motion of every pixel in the image are measured
- Custom image processing software generates vibrograms or waveforms.
- Software measures subtle motion and amplifies to be visible by the naked eye

On-Line Thermography

- Enables Thermography 24/7
- Remote Fault detection and Alarm Generation
- Remotely Monitor Multiple Critical Substation Assets from One Central Controller
- Automated Monitoring Tours and Full Manual Directed Control

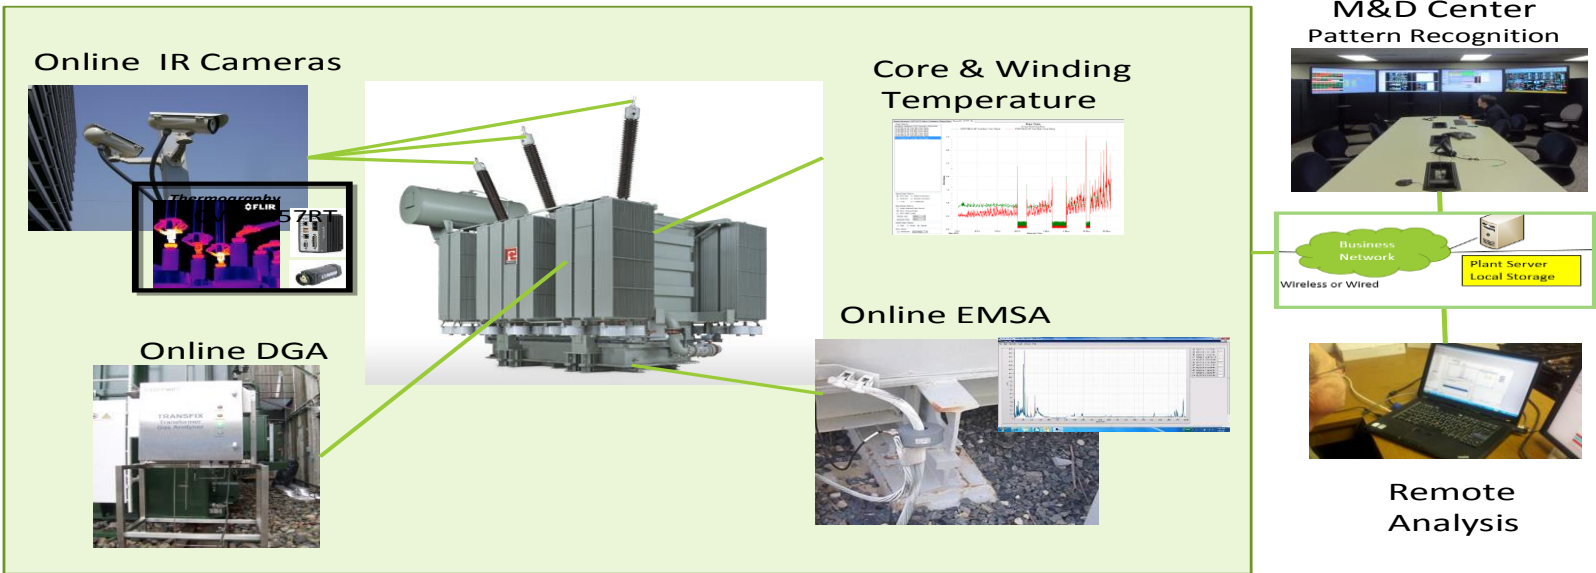

New Sensor Technology for Advancing OLM

Wired or Wireless
Vibration Sensors

Online Transformer Monitoring Using IR Cameras, EMSA, DGA and
Core & Winding Temperature

On-line Oil Particle
Counter

Wireless Gauge
Reader

Cycle Isolation Sensors

Petasense

- Sensors are Wi-Fi
- Purchased 10 sensors for POC

Cutis Wright :

- 900 MHz sensor will work on the DAS at NMP

Petasense Transmitter*

Predictive Maintenance based on machine learning from multisensor input

Sensing

Most important sensors for Pd.M. of all kinds of machines

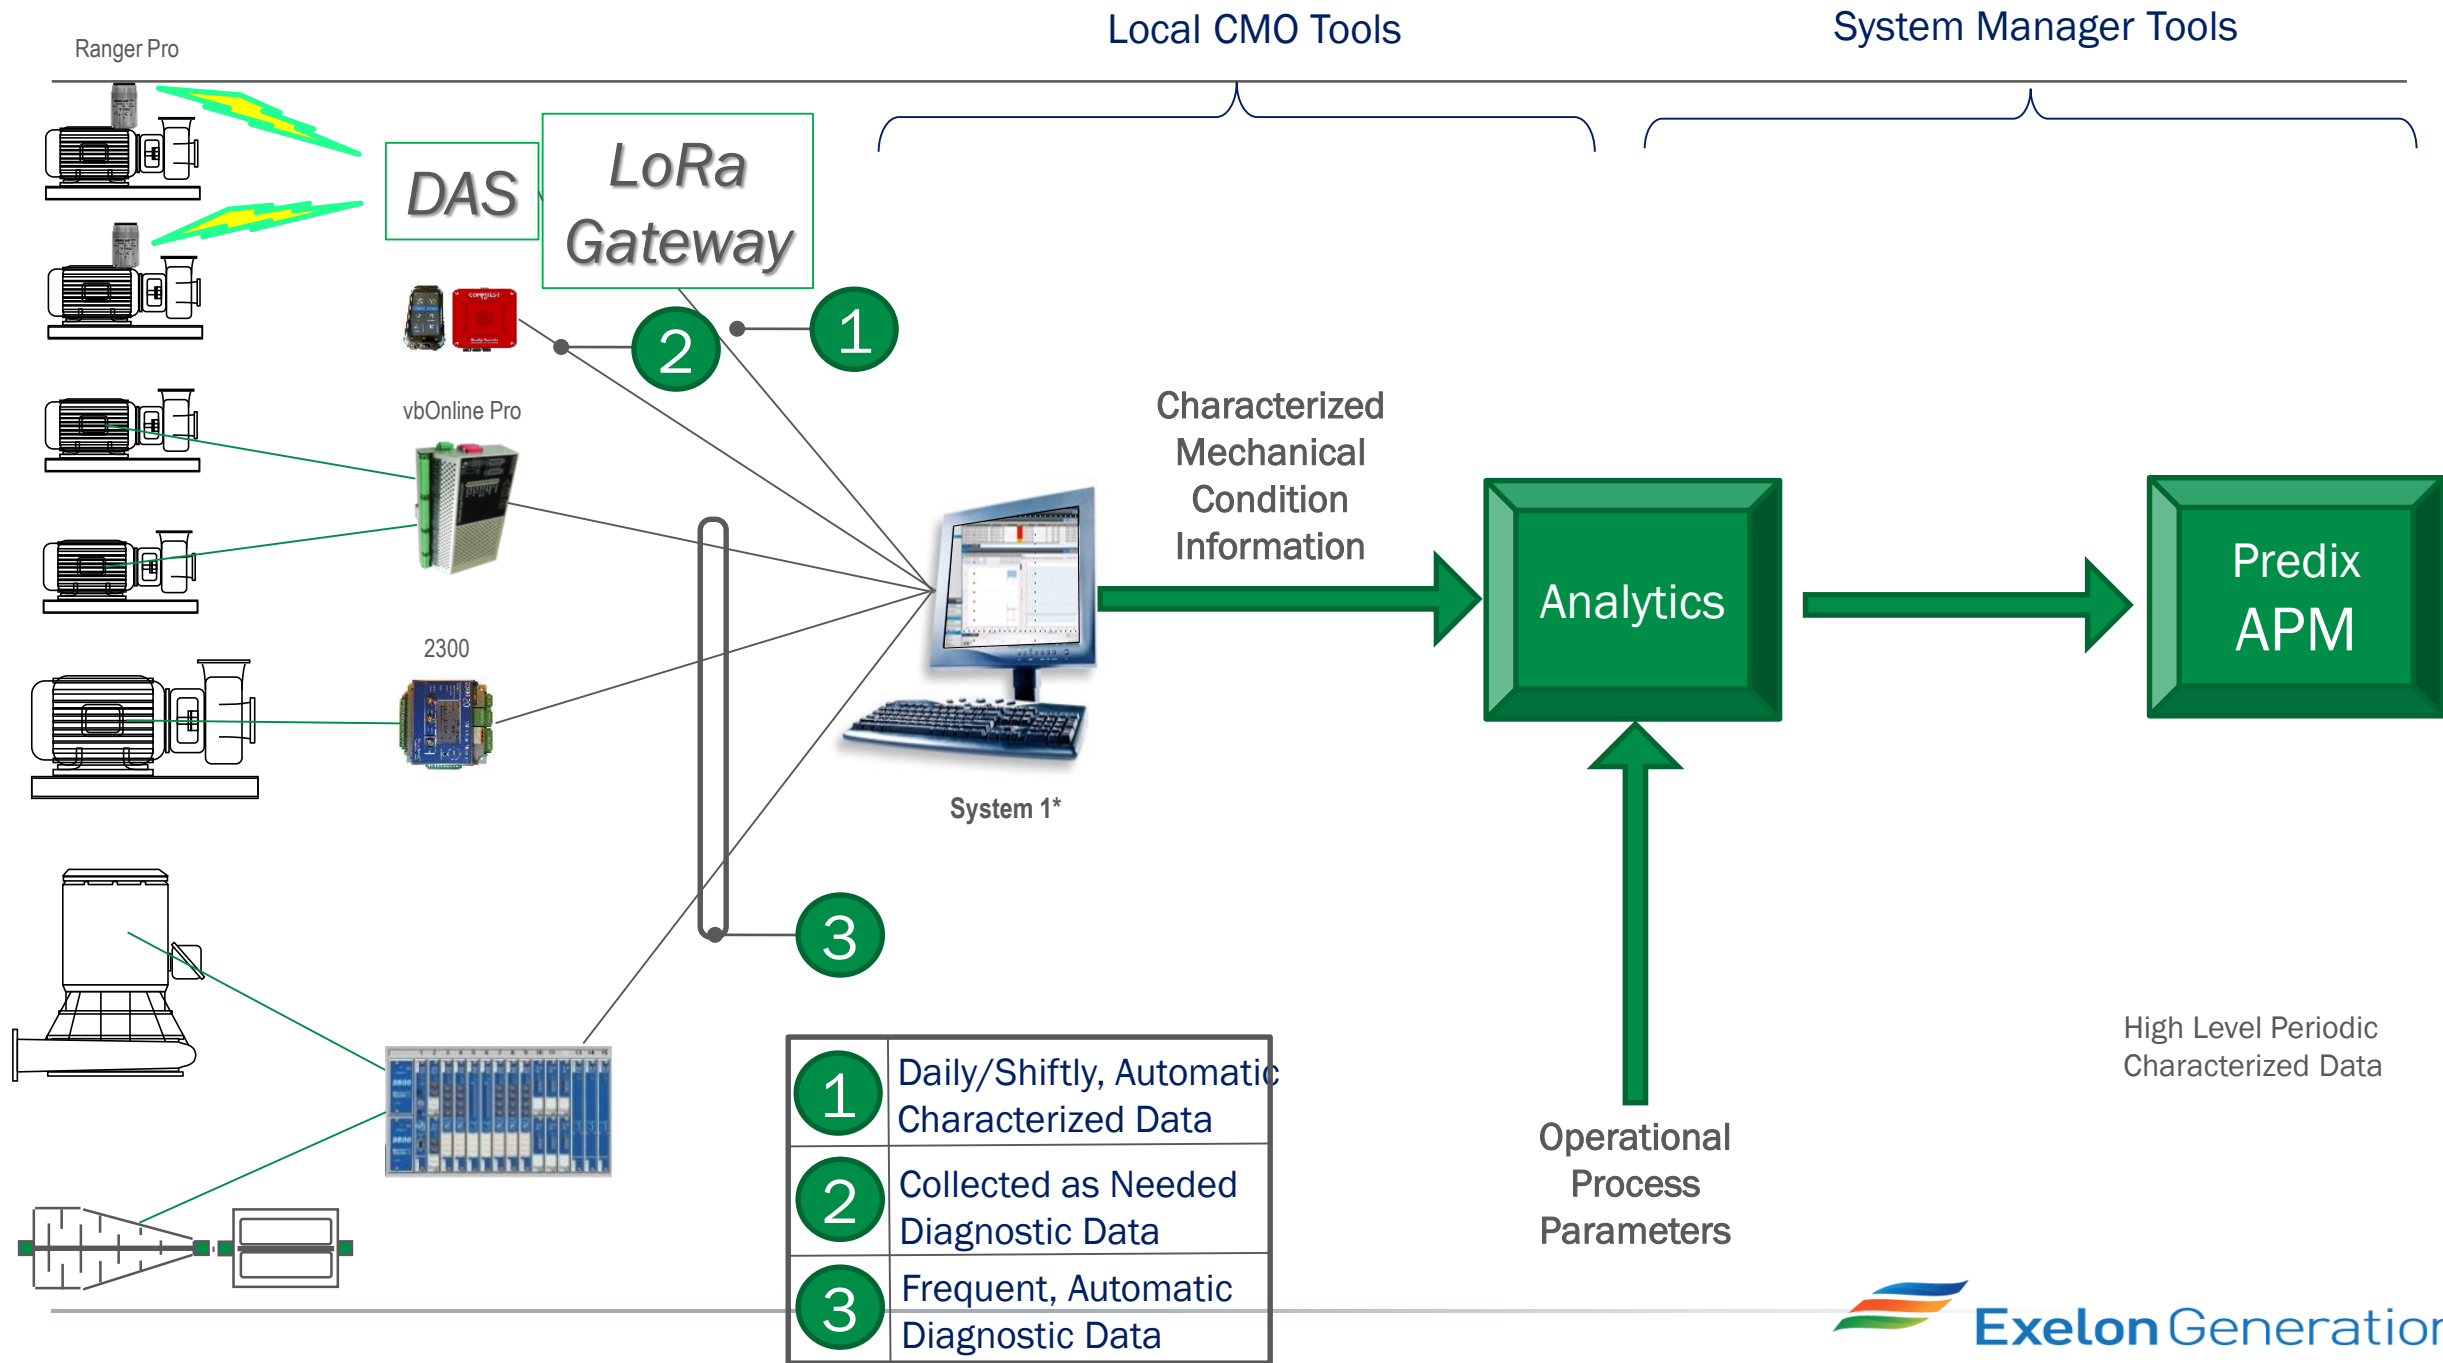

Communication

Supports Ethernet in addition to WiFi and Bluetooth

Power

Battery or externally powered, enables continuous data collection

Questions?
